Managed Services - Cloud Migration

Managed services offer a host of support functions to help organizations improve their performance on the cloud. UnitedLayer Cloud Migration services can easily move your applications, data, and infrastructure to the cloud. Our experts will help you develop your migration plan, assess your application portfolio, review your cost structure, and find the best cloud platform for your needs. When you switch to AWS, Microsoft Azure, and Google Cloud Platform, we have got the experts to help make it a success.

Partner with UnitedLayer to cut costs, increase productivity, and improve results with Cloud Migration Managed Services.

Free your IT resources to concentrate on key areas of the business while we handle the infrastructure.

Achieve your goals with the assistance of our expert support to develop the best migration strategy.

Pre Migration:

Pre-migration planning: We assess your current IT infrastructure and determine the applications that need to be migrated.

Estimation of Architecture: Determining the architecture to carry out the migration with minimal disruption to the business operations, at a lower cost and over the shortest time period.

Solution Modeling: Customized migration solutions based on customer requirements ensure minimum interruption to customer's business operations.

Migration and Testing

Execution: After determining the migration architecture and the data that needs to be migrated, we execute the migration process to the cloud, which ensures minimal disruption to normal operations.

Testing: Conduct testing of migrated data and applications to ensure that it is optimized, secure, and easily accessible to the users.

Post Migration

Post-Migration Support: Cloud Migration provides support to the post-migration environment with real-time monitoring of applications' performance in the new environment. We conduct assessments and secure access to the data to ensure it meets all the regulatory requirements and update the OS drivers to match the new environment.
