

Managed Services - IT Estate Assessment

Managed Services provide a host of support functions to help organizations improve their performance in the cloud. We have experience in delivering end to end data center assessment of hardware's end of life (EOL) and end of support (EOS), for servers, routers, and console managers, etc.

UnitedLayer provides IT assets assessments to help organizations efficiently migrate to a new data center or cloud. Efficient Migration ensures that mission-critical systems can continue to run optimally. We believe that maintaining the peak levels of infrastructure available in today's economy isn't just a good policy – it's expected.

We provide asset, energy, power, DR planning, security audits, and standards-compliance third-party auditing reports on your hosted infrastructure & deliver a compliant infra and third-party audit report as a service.

There are several requirements and guidelines to meet, depending on the organization, and the data forms of the data center processes and stores. A few examples: PCI: ensuring that appropriate procedures are in place to protect credit card data, HIPAA: ensuring that confidential health information is stored and hosted online in compliance with HIPAA hosting standards, and that stored data is secure and only available to individuals allowed to access it, Sarbanes-Oxley (SOX): ensuring proper protection of electronic records.

An audit to ensure standards compliance results in documentation that appropriate policies and procedures are in place to fulfill the specifications set out in those standards.

Audits for other requirements may also be carried out: SSAE 16: measurement of data center controls related to financial reporting, SOC 1: measurement of data center controls related to financial reporting (similar to SSAE 16), SOC 2: measurement of security, availability, processing integrity, confidentiality, and privacy controls, SOC 3: documentation of compliance with SOC 2 along with an approval seal for use on websites and other marketing materials and documents.

UnitedLayer Advantage

UnitedLayer provides the Colocation services from one of the largest data centers in San Francisco, USA, at 200 Paul Ave. We put you on the fast track to growth and help you realize the Full Value of your investment in any Cloud Infrastructure Solutions. We Design, Build, and Manage Enterprise-Grade Colocation Solutions that meet the Performance, Security, and Scalability to serve your Unique Business Needs.
