Enterprise Security, Delivered at Scale

**From Risk to Resilience: Experience How UnitedSecure Solves
Cloud Security Challenges**

AI-ENABLED SECURITY SERVICES & SOLUTIONS

As enterprises accelerate towards AI-innovation, cloud adoption is paramount. Yet with this shift comes a new wave of security challenges, ranging from identity threats to compliance gaps. **UnitedSecure** delivers **AI-driven protection** across hybrid and multi-cloud environments, enabling real-time threat detection and remediation, automated compliance, and business continuity.

Unified Observability

Without a holistic view of application performance and security posture, security teams struggle to correlate logs, detect threats in real time, respond, and maintain compliance.

Security Postures

Misconfigured cloud security settings, such as exposing unencrypted storage to the public internet, are among the top causes of data breaches.

Insecure APIs

Without a holistic view of application performance and security posture, security teams struggle to correlate logs, detect threats in real time, respond, and maintain compliance.

Identity & Access Management

Cloud deployments are accessible from anywhere via the internet, but this also increases the risk of unauthorized access through compromised credentials or poor access control.

Dynamic Workloads

Cloud resources can scale dynamically based on workload needs. However, legacy security tools struggle to enforce policies in such fast, flexible environments.

Compliance & Audits

Even without a breach, non-compliance with industry-specific regulations can lead to reputational damage and legal consequences—especially when audit trails are weak or fragmented.

UNITEDSECURE | MULTI-LAYERED, AI-DRIVEN SECURITY-FIRST SOLUTION

UnitedSecure delivers **comprehensive, automated protection** by continuously scanning your entire **infrastructure for vulnerabilities, misconfigurations, identity risks, and compliance violations**. Its **multi-layered security framework** ensures **24/7 defense** and a robust security posture—**while reducing IT workload**.

UnitedSecure Layered Security Solutions

Physical Security

8-layer data center security, including access badges and controls, biometrics, 24/7 surveillance with CCTV, sensors and on-site security

Operational Security

24/7 managed support, unified cloud management, and automated security patching to ensure baseline resilience

Advanced Threat Protection

Malware Detection

Identifies and blocks malicious vector before it can disrupt operations

Vulnerability Scanning

Uncovers weaknesses so they can be remediated proactively

AI/ML Intelligence

Built-in intelligence layer to detect and predict emerging threats

Security Controls Layer

Data Security

AES-256 encryption, managed backup, disaster recovery, and Data Loss Prevention (DLP) tools

Identity & Access Management

RBAC, MFA, fine-grained access permissions, and centralized policy enforcement

Network Segmentation & Security

VPN, VLAN segmentation; Firewalls, DDoS protection, SSL/TLS encryption, and IP/ports restrictions

Monitoring & Incident Response Layer

Real-Time Monitoring

AI/ML-powered threat detection in real-time, enabling immediate action

Incident Response

Orchestrates rapid, consistent responses to security incidents, patch management, automated compliance

Cloud SIEM

Security Information & Event Management (SIEM) correlates events across systems to identify attack patterns

DevSecOps Integration

Security in CI/CD pipelines, Infrastructure as-Code (IaC) security, automated scans, and detailed audit trails

Compliance & Audit Layer

Regulatory Compliance Audits

Pre-configured frameworks for HIPAA, PCI DSS, GDPR, SOC 2, FedRAMP, ISO 27001, etc.

Continuous Compliance Monitoring

Persistent oversight to detect and address compliance gaps

Audit Trails & Reporting

Provides transparent, tamper-proof records for investigations and audits

Cloud Infrastructure Security Layer

Performance-Optimized Compute

VMware ESXi delivers efficient, secure virtualization for scalable workloads

100K+ IOPS All-Flash Storage

100K+ IOPS for high-speed workloads, reliable data access and storage performance

High-Performance Networking

10G-40G connections ensure uninterrupted connectivity and fault tolerance

99.999% High-Availability

With N+M cluster architecture for seamless operations

EXPERIENCE SECURITY WITH PERFORMANCE, AND COMPLIANCE AT SCALE

UnitedSecure is all-in-one **security solution for enterprises navigating highly regulated environments**. While it provides **unified, automated security with audit-ready logging and compliance**, it is a **catalyst for operational efficiency and business agility**, enabling enterprises with **scalable, high-performance, and rapid disaster recovery**.

On-Demand Scalability

Get more value without sacrificing control or performance:

Data Center in a Box

Deployable in any global data center location

Cost Advantage

Upto 30% lower cost than leading public clouds

On-Demand Scalability

Flexible vCPU and RAM—no fixed sizes or limits

Disaster Recovery & Seamless Integration

As workloads grow, your infrastructure should stay resilient and automatically.

Rapid Setup

Easily deploy across multiple environments with minimal setup seamlessly

Disaster Recovery

<1-min RTO, 15-min RPO

<3-min MTTD, 10-min MTTR

Automated failovers, regular recovery drills

Compliance & Audits

Meet regulatory mandates with embedded, audit-ready security postures.

Ready to take the next step?

Deploy UnitedSecure to safeguard your cloud infrastructure with **industry-leading security, performance, and compliance**—at scale.
