

Powering Hybrid Colocation with AI

From colocation to hybrid colocation to AI-powered hybrid colocation, UnitedLayer provides a full spectrum of solutions and the edge for unified hybrid infrastructure management.

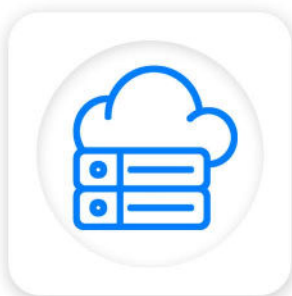

From Colocation to AI-Driven Hybrid Colocation Management

Our Legacy

UnitedLayer began as a premier data center provider, building and operating state-of-the-art Tier 3+ facilities in **San Francisco, Los Angeles, and Las Vegas**. Over almost **two decades**, we gained deep expertise in delivering secure, high-availability environments for the most demanding IT workloads.

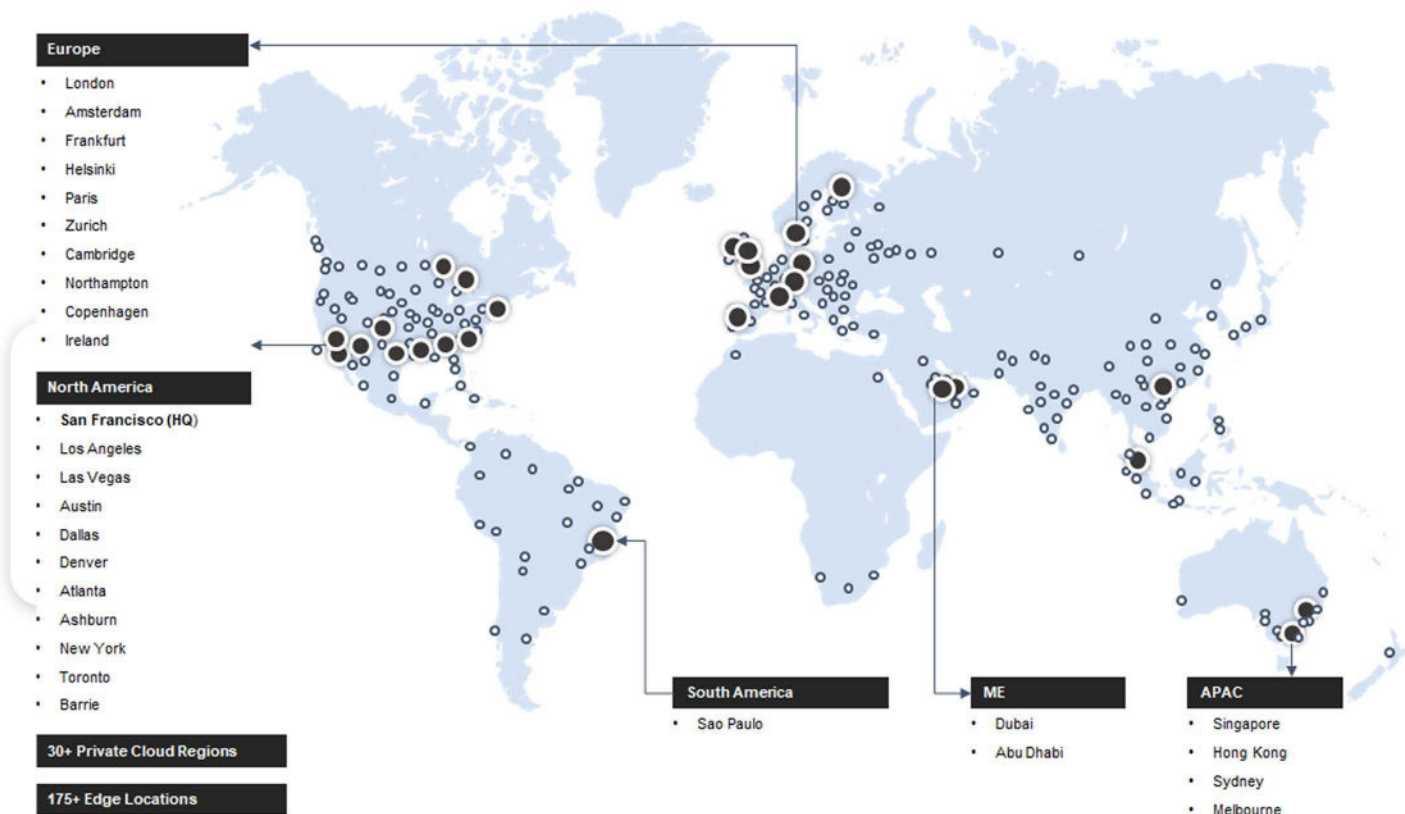

Expansion into Hybrid Colocation

Building on this strong foundation, we expanded into colocation solutions, enabling enterprises to colocate their hardware in **carrier-neutral, seismically resilient, and energy-efficient** data centers. This delivered security, compliance, and performance without the burden of owning and operating physical data centers.

Global Reach Today

Today, with **30+ private cloud regions** and **175+ edge locations** across **five continents**, UnitedLayer brings cloud computing closer to customers, addressing both performance and data sovereignty needs.

Introducing Hybrid Colocation

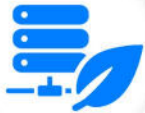

Best of Both Worlds

Secure, Compliant & Highly Available Colocation Data Centers

Physical Security

24/7 video surveillance, biometric access & multi-factor authentication, strict visitor policies & on-premises security personnel, anti-tailgating mantraps & segmented security zones, activity logging and audit trails

Green Data Centers

Liquid cooling (direct-to-chip, immersion cooling), renewable and alternative energy sources, optimized server layout & airflow design, hot aisle/cold aisle containment, rear door heat exchangers & in-row cooling systems

Resilience

99.999% high availability of workloads. Rapid failover mechanisms for uninterrupted business continuity. SLA-aligned uptime guarantees for mission-critical operations

Geographic Diversity

With strategically distributed facilities, UnitedLayer ensures **compliance with data sovereignty laws** and provides resilience, keeping workloads performant and protected—even in the event of regional disasters

Regulatory Compliance

Our facilities adhere to **50+ global and regional regulatory standards** such as HIPAA, PCI-DSS, SSAE 16, ISO, and NIST—ensuring workloads meet both industry and government requirements.

Secure, Compliant & Highly Available Colocation Data Centers

Hybrid Colocation enables to combine colocated hardware assets with both private cloud resources and multiple public cloud providers. Workloads move fluidly across **on-premises, data centers, and clouds**—with no silos, no complexity. Through **carrier-neutral, cloud-integrated data centers** and **software-defined orchestration**, **enterprises gain:**

**Flexible workload
placement**

**Optimized
performance**

**Compliance
alignment**

Cost efficiency

Manage Hybrid Environment with a Single Intelligent Dashboard

UnityOne.AI provides a single pane of glass view for end-to-end data center infrastructure management (DCIM). It reduces operational complexity by consolidating **disparate management tools**, **automating routine tasks**, and providing **intelligent insights** for proactive management and decision-making.

**Centralized real-time
visibility & control**

**Asset management
& compliance**

**Topology
visualization**

**Monitoring &
observability**

Agentic AI-Powered Automation & Optimization

UnityOne.AI integrates **intelligent autonomous agents** for seamless hybrid infrastructure management with zero to no manual intervention. These AI-driven workflows enhance system **reliability**, **reduce downtime**, and **accelerate incident resolution**. The platform also includes a dedicated FinOps Agent for real-time cost optimization.

Why UnitedLayer Hybrid Colocation?

Trusted Data Center Legacy

Almost **two decades of expertise** operating premium colocation facilities with exceptional uptime, security, and compliance

Leading Colocation Services

Carrier-neutral sites with dense interconnections to major cloud providers, built for high performance and scalability.

UnityOne.AI for DCIM

Unified AI-driven CMDB providing intelligent automation, real-time observability, and cost & sustainability optimization.

Hybrid Cloud Simplification

Centralized control over colocated hardware and cloud assets, empowering agile workload mobility and operational efficiency.

Empower Your Infrastructure with Hybrid Colocation

UnitedLayer's Hybrid Colocation solution delivers enterprise-grade infrastructure combined with cutting-edge AI orchestration and management capabilities. It's your foundation for accelerating digital transformation, reducing operational complexity, and achieving business agility in a world where hybrid cloud is the future.
